

Feiran Wang

🎓 Undergraduate in Artificial Intelligence | 📍 Xi'an Jiaotong University

✉ 1952684458@qq.com 📞 13339084562
🌐 brianwang2007.com 🐙 github.com/brianwang2007xjtu

Education

Undergraduate | Xi'an Jiaotong University, *Artificial Intelligence* Sept 2025 – Present

• **Rank 1/82** | **GPA 4.15/4.3**

Exchange | LMH, University of Oxford, *Artificial Intelligence* Summer 2026

YC Prep. | Xi'an Jiaotong University, *XJTU Youth Class Preparatory Program* Sept 2023 – June 2025

• **Rank 2/196** | **GPA 4.05/4.3**

English Proficiency

IELTS Overall 8.0 | Listening 8.5 | Reading 8.5 | Writing 7.0 | Speaking 7.5 2025

CET-6 649 | Oral test: Excellent 2024

Competitions

The 28th “FLTRP·ETIC Cup” National English Debating Competition | National Bronze Award 2026

The 30th China Daily “21st Century Cup” National English Speaking Competition | National Second Prize 2025

National English Competition for College Students | Second Prize 2025

National College Mathematical Modeling Contest | Provincial Second Prize 2025

Awards

Third-Class Scholarship | Xi'an Jiaotong University 2025

XJTU Freshman Cup Go Tournament | Third Place 2024

Skills

AI Generative AI, VLA, JEPA, WAM, SNN, and spatial intelligence

Programming Python, PyTorch, C++, front-end development

Hobbies

Go, classical music, the violin, basketball, and movies.

Self-Evaluation

My first real encounter with artificial intelligence came in 2016, when I watched the historic Go match between AlphaGo and Lee Sedol. Not yet nine years old and seriously training in Go myself, I had been dreaming of turning professional – but the sheer strength of the machine shook me. Seeing that a computer could already play like this, I felt certain that AI would one day surpass human players. So I decisively gave up my ambition of a professional dan rank. My understanding was still limited at that age, yet that moment planted in me a deep fascination for reinforcement learning, and I have followed it ever since.

In 2023, during my first year of the Xi'an Jiaotong University Youth Class preparatory program, I co-led an AI study group. Together we **designed and built an agent that plays Generals**, the fast-paced real-time strategy game – my first complete attempt at turning ideas about game AI into working code.

In the summer of 2026, at **Lady Margaret Hall, University of Oxford**, I studied machine learning and cross-enrolled in a course on the frontiers of artificial intelligence. There I systematically worked through modern architectures – transformers, multimodal models, contrastive learning, generative models, and vision-language-action (VLA) models – reading a large number of research papers alongside the coursework. Since then I have kept up that reading practice, publishing my notes on **JEPA**, world-action models, diffusion models, and flow matching.

Beyond my studies, I have wide-ranging interests – Go, the violin, basketball, and writing – and they have taught me the patience that research demands. I care about teamwork: I communicate proactively, respect differing views, and take a constructive role so that projects move forward. Through these experiences – from building a game-playing agent to reading the VLA literature – I have equipped myself with solid programming skills and a real feel for current research, and I am genuinely ready to join a research group and contribute from day one.
